Wow, where do I even start? First off, I am aware Johan Arwidmark is considered THE guru of deployment, and this book certainly illustrates that HE knows his stuff. However, this book teaches you none of that. From the very beginning, the author has you download a pack of pre-made deployment scripts. Actually, he never actually tells you to do so he just tells you to start using them, you have to locate the Appendix A in the back of the book to realize where they come from and how to implement them. The rest of the book is essentially a tutorial on using Johan's scripts with no explanation on what they're doing. Learning Deployment in this way is somewhat similar to learning to paint by doing one of those numbered connect-the-dots drawings you find in the comic section of the Sunday newspaper. The deployment scripts, aside from taking all of the education out of this book, aren't even updated. The client machines in the lab are still Windows 7! This entire book actually, while claiming to be updated for Server 2012 R2 and Windows 10, seems like it has been brushed with vaguely updated references using a wide tooth yard rake to collect any deprecated material. There is an entire chapter on deploying Office CTR, which is then copy and pasted into a section of the chapter thereafter. Oh there's also an Appendix B which is, again, how to deploy Office! TL;dr: Out of this entire book, there is potentially enough educational content to make a 10 page PDF. The rest is Simon Says without any explanation, in a way that sidesteps teaching you deployment fundamentals like creating application packages and, testing task sequences, etc. At best, this is a very abridged glossary of deployment terms.
